A resource for everyone committed to ensuring all Black people are free – happy, healthy, and whole.
Since the introduction of the HIV epidemic, Black people have continued to be disproportionately impacted by HIV because of racism and systems set up to deny Black people access to health care, preventive medicine like PrEP. In addition, stigma shames many into avoiding tested or conversations about sexual health. The fact is, too many Black people are dying as a result of HIV, and the stigma surrounding it, and this does not have to be our reality. Ending the epidemic in our lifetime is not a question of resources but a question of will. You are critical to accomplishing this goal.

Since the beginning of the HIV epidemic, there has been stigmatizing messages and derogatory language. The stigma and shame surrounding HIV, especially in racial/ethnic and religious communities too often prevent individuals from accessing HIV testing, prevention, and treatment services and supports. Knowing that when we talk about HIV we can stop HIV, this Words Matter HIV toolkit is designed to facilitate what can understandably be uncomfortable and, at times, difficult conversations that can save lives. By changing the way we talk about HIV, we can move closer toward eliminating the hate that enables the virus to thrive.

Toni Morrison reminded us, “Oppressive language does more than represent violence; it is violence; does more than represent the limits of knowledge; it limits knowledge.” It is our hope that the toolkit facilitates affirming conversations where people feel safe, comfortable, and supported in disrupting HIV bias and stigma and facilitating healing for those living with HIV.

David J. Johns,

Executive Director, NBJC
Too often language is used as a tool of oppression. Negative words and phrases can perpetuate stereotypical ideas of individuals and communities that shape our views and interactions. Negative language can reinforce layered forms of oppression and discrimination based on gender, race, sexual identity, socioeconomic status, and other factors. Repeated exposure to negative language affirming stigma, oppression, and discrimination negatively affects the health and well-being of an individual. Words are what we use to process, define, and express our human experience. There is power in precision and words have the power to build or break our perceptions, understandings and expectations. Words can empower or destroy, encourage or discourage, give value or render worthless.

We should always remember that there is power in precision and words matter.

Words can be used to create spaces where people feel safe, comfortable, and supported. Words are a powerful tool in disrupting bias and stigma as well as facilitating healing.

It is important to use words to eliminate HIV stigma because when people are afraid of experiencing discrimination they are less likely to be tested or treated for HIV. Additionally, treating individuals living with HIV differently can negatively affect their ability to secure life’s necessities like housing, employment, medical care, and necessary social support.

"Words matter in profound and palpable ways" —David J. Johns
The Words Matter HIV Stigma Toolkit is a resource that can be helpful in having life affirming conversations.

The toolkit invites each of us to consider three things:

1. **How can we create safe and brave spaces** where everyone feels comfortable talking about HIV specifically, and holistic health and wellness more generally?

2. **How can everyday language eliminate stigma** and affirm relevant scientific and medical advancements that can reduce the disproportionate rate of impact to the Black community?

3. **How can we replace negative and harmful language with affirming and healing language** that has the power to strengthen communities and ultimately end the HIV epidemic?

As a living document, this toolkit will evolve to reflect emerging culturally inclusive practices. The Words Matter Campaign will leverage Black-centered networks committed to the health and well-being of Black communities to disseminate and support the use of the toolkits.
HIV stigma refers to negative attitudes and beliefs, prejudice, and discrimination about people living with HIV. HIV stigmatization is a process that builds on previous stigma and discrimination based on actual or perceived health status, race/ethnicity, religion, socioeconomic status, age, sex, sexual orientation, and gender identity. Since the beginning of the HIV epidemic, there have been stigmatizing messages and derogatory language towards HIV.

Stigma, in part, results from sensational news headlines and prevention messages from health departments, social service and governmental agencies that have misinformed the general public. For example, the phrase “full-blown AIDS” was conjured by the media to evoke the image of something bubbling up inside of a person that might ooze onto someone else who is not living with HIV. There is no such thing as “full blown AIDS.” The clinical term is Stage 3 HIV.

**What is HIV Stigma?**

1. Health care professional refusing to provide services to someone living with HIV.
2. Prosecuting people living with HIV for failing to provide proof of disclosure HIV status to partner and employers.
3. Refusing casual or intimate contact with someone living with HIV.
4. Socially isolating an individual or a community because they are living with HIV.

**Examples of HIV Stigma**

1. Belief that only certain communities get HIV.
2. Feeling that people deserve to get HIV because of their choices.
3. Judgement of those who take steps to prevent HIV transmission or treat HIV.

**Examples of Discrimination**

1. Increased internalized stigma.
2. Decreased participation in preventative measures.
3. Marginalized treatment in health care.
4. Loss of family and/or community.
5. Increased stress.

**Effects of HIV stigma and discrimination**

**What are the effects of HIV Stigma?**

**HIV stigma affects the well-being of people with HIV.** People living with HIV can internalize the stigma they experience and, as a result, develop a negative self-image. They may fear they will be discriminated against or judged negatively if their HIV status is revealed.

“Internalized stigma” or “self-stigma” happens when a person takes in the negative ideas and stereotypes about people living with HIV and applies them to themselves. HIV internalized stigma can lead to feelings of shame, fear of disclosure, isolation, and despair. These feelings can keep people from getting tested and treated for HIV.
## Stigma Terminology Guide

### Use this guide to inform positive, Asset-based communication

<table>
<thead>
<tr>
<th>Stigmatized language to avoid</th>
<th>Explanation</th>
<th>Preferred language</th>
</tr>
</thead>
<tbody>
<tr>
<td>HIV patient, AIDS patient</td>
<td>People-first language puts the person before the medical condition.</td>
<td>Person living with HIV.</td>
</tr>
<tr>
<td>Positives or HIVers</td>
<td>It describes the condition they have, not who they are and consequently honors their humanity.</td>
<td></td>
</tr>
<tr>
<td>AIDS or HIV carrier</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Clean</td>
<td>This term implies that individuals living with HIV are “dirty”.</td>
<td>HIV-negative.</td>
</tr>
<tr>
<td>Died of AIDS, to die of AIDS</td>
<td>AIDS is not an infectious agent- it is a surveillance definition meaning a syndrome of opportunistic infections and diseases that can develop as immunosuppression deepens along the continuum of HIV infection.</td>
<td>Died of AIDS-related illness, AIDS-related complications or end stage HIV.</td>
</tr>
<tr>
<td>AIDS virus</td>
<td>AIDS virus is non-existent. AIDS is a syndrome, not a virus.</td>
<td>HIV.</td>
</tr>
<tr>
<td>Full-blown AIDS</td>
<td>This implies there are varying stages of AIDS like half-blown AIDS. People have AIDS only when they present with AIDS-defining illness like an opportunistic infection.</td>
<td>There is no medical definition for this phrase, simply use the term AIDS, or Stage 3 HIV.</td>
</tr>
<tr>
<td>HIV virus</td>
<td>This term is redundant. HIV stands for Human Immunodeficiency Virus.</td>
<td>HIV.</td>
</tr>
<tr>
<td>AIDS orphans</td>
<td>Mislables children as HIV-positive. Stigmatizes an individual based on social condition.</td>
<td>Orphans and other children made vulnerable by AIDS.</td>
</tr>
<tr>
<td>HIV infected mother</td>
<td>Mislables individuals. Stigmatizes an individual based on medical condition.</td>
<td>Mother living with HIV.</td>
</tr>
<tr>
<td>Mother to child transmission</td>
<td>Results in blaming mothers.</td>
<td>Vertical transmission, perinatal transmission.</td>
</tr>
</tbody>
</table>

People-first language puts the person before the medical condition.
<table>
<thead>
<tr>
<th>Stigmatized language to avoid</th>
<th>Explanation</th>
<th>Preferred language</th>
</tr>
</thead>
<tbody>
<tr>
<td>AIDS test</td>
<td>AIDS is not a virus; therefore, there is no test for it.</td>
<td>HIV test.</td>
</tr>
<tr>
<td>To catch AIDS</td>
<td>AIDS cannot be caught or transmitted. People can be exposed to and contract HIV.</td>
<td>An AIDS diagnosis, to contract HIV.</td>
</tr>
<tr>
<td>To contract AIDS</td>
<td></td>
<td></td>
</tr>
<tr>
<td>To catch HIV</td>
<td></td>
<td></td>
</tr>
<tr>
<td>To pass on HIV</td>
<td>HIV can be transmitted, not inherited</td>
<td>Transmit HIV.</td>
</tr>
<tr>
<td>Prostitute or prostitution</td>
<td>“Prostitute” is a disparaging word that does not reflect that sex work, for some, is a form of employment, not a lifestyle.</td>
<td>Sex worker.</td>
</tr>
<tr>
<td>Promiscuous</td>
<td>This term is derogatory, judgmental, and accusatory. This is a value judgment and should be avoided.</td>
<td>This is a value judgment and should be avoided. Instead use: having multiple partners.</td>
</tr>
<tr>
<td>Down-low</td>
<td>This term has been used, chiefly by the media, to label subgroups of Black men who engage in same-sex behavior associated with sexual risks for HIV transmission in Black communities.</td>
<td>Do not use this to describe individuals as it is derogatory and continues homophobia, biphobia, and LGBTQ/SGL bias and stigma.</td>
</tr>
<tr>
<td>Thot</td>
<td>This is a derogatory acronym for “that hoe over there” or “thirsty hoe over there” suggesting one is sexually promiscuous.</td>
<td>Do not use this to describe individuals as it is misogynistic and derogatory.</td>
</tr>
<tr>
<td>In these streets</td>
<td>Another term to describe individuals’ sexual history as promiscuous.</td>
<td>Do not use this to describe individuals as it is derogatory.</td>
</tr>
</tbody>
</table>

Changing language changes lives.

Words Matter!
1. Black Americans account for a higher proportion of new HIV diagnoses, those living with HIV, and those who have ever received an AIDS diagnosis, compared to other races/ethnicities.

2. In 2016, Black Americans accounted for 44% of HIV diagnoses, though they comprise 12% of the U.S. population.

3. Gay, bisexual, and other men who have sex with men (MSM) account for 70% of new HIV infections in our nation, with Black gay, bisexual, and other MSM making up the majority of these new infections annually.

4. Black gay and bisexual men tend to have sex partners of the same race which lend to smaller sexual networks with more partners living with HIV increasing the chance of coming in contact with HIV, compared to white or Hispanic/Latino gay and bisexual men.

5. Limited access to quality health care, lower income and educational levels, and higher rates of unemployment and incarceration may place some Black Americans, like gay, bisexual men, and transgender women, at higher risk for HIV.

6. Between 2012-2015, only 10% of all new PrEP prescriptions were made for Black/African Americans.

7. Stigma, discrimination, homophobia put those at risk for HIV in Black America at risk for many health issues and may affect their ability and access to quality health care, which serves as another barrier to eradicate HIV/AIDS in Black America.

**To eliminate HIV in the Black community, we must:**

1. Increase the number of Black people routinely tested;
2. Reduce the numbers of Black people becoming HIV positive;
3. Increase support for Black people living with HIV, including prioritizing the suppression of viral loads;
4. Educate the general public on how language can stigmatize people living with HIV, thereby decreasing the number of people affected by HIV;
5. Provide culturally inclusive language to curate conversations on the impact of HIV on their communities; and

Source: CDC
Community conversations are about cultivating meaningful discussions rooted in empathy, understanding, vulnerability, and humanity. They are designed to advance positive, asset-based conversations about HIV that disrupt stigma, encourage testing and treatment. These conversations are intentional, thus we take the time to hear and understand all point of views without jumping to conclusions. It is our hope that you walk away feeling heard and empowered.

Whether you engage in conversation one on one or as a group activity with a moderator, use the instructions below to engage in your community conversation.

**Facilitator Notes: Things to consider before the conversation:**

1. Identify a Facilitator
2. Write Vision and Goals
3. Identify Format
4. Calendar Your Talk

**Step by Step Instructions**

**Step 1: Prepare for Conversations** by centering and grounding. Take the time to breathe together and acknowledge what is happening in your body that has the potential to shape the conversation (e.g. moods, thoughts, anxiety, and energy).

**Step 2: Identify Guiding Principles**

Use guiding principles to maintain shared expectations throughout the conversation.

1. **Intentionality**: Remember, words matter. Be intentional with language. Begin by discussing and committing to respect names and pronouns. Avoid language that is intended to harm and be mindful of bias that may be reflected in your words and how you communicate them.
   
   If you do not feel that you have the language needed to communicate a particular feeling or express a point come from a place of love and ask for assistance.

2. **Respect**: Expect varying perspectives. Respect everyone participating in the conversation by investing your energy in understanding rather than judging or listening simply to respond.

3. **Mindfulness**: Be and stay present and aware of who is speaking and what they are saying by giving them the gift of your full attention. Actively listen without interrupting. When the person is done speaking, reflect what you heard them say before sharing your thoughts and feelings.

4. **Open mind**: Expect to be made to feel uncomfortable as you learn and grow. Keep an open mind and commit to learning.
Step 3: Establish Intent:

Answer these questions together:
1. What do you hope to accomplish as a result of having engaged in this conversation? What will happen after the conversation concludes?
2. What do you not know that makes you uncomfortable or anxious?
3. What do you know or feel that you want to ensure is understood or considered?

Answer these questions individually:
1. What is your definition of stigma or bias?
2. How does feeling silenced or experiencing bias make you feel?
   
   Anticipated responses:
   a. This makes me feel............
   b. It makes me think of doing..........
3. How do I react when I witness stigma or bias?
4. How do I want to reach when I witness stigma or bias?
5. How does stigma or bias manifest in my language and communication?
6. What steps will I take to ensure that stigma and/or bias does not manifest in my language or communication?
**Pronoun Chart**

**Use this chart as guidance to pronouns. This list is NOT exhaustive. Any pronouns are valid!**

Note: As the facilitator, introduce your pronouns to model for the other members of the conversation. Explain why you are saying your pronouns and invite others to introduce their pronouns. If someone does not want to disclose their pronouns, refer to that person by their name.

<table>
<thead>
<tr>
<th>When my pronouns are:</th>
<th>Use them in this way...</th>
</tr>
</thead>
<tbody>
<tr>
<td>She, her, hers</td>
<td>She had great insight.</td>
</tr>
<tr>
<td></td>
<td>Her authenticity is admirable.</td>
</tr>
<tr>
<td></td>
<td>I support her in the conversation by honoring her pronouns.</td>
</tr>
<tr>
<td>He, him, his</td>
<td>He has so much passion!</td>
</tr>
<tr>
<td></td>
<td>His feelings are valid.</td>
</tr>
<tr>
<td></td>
<td>I support him in the conversation by honoring his pronouns.</td>
</tr>
<tr>
<td>They, them, their</td>
<td>They are understanding.</td>
</tr>
<tr>
<td></td>
<td>Their presence makes me feel safe.</td>
</tr>
<tr>
<td></td>
<td>I support them in the conversation by honoring their pronouns.</td>
</tr>
<tr>
<td>Ze, zir, zirs</td>
<td>Ze is courageous.</td>
</tr>
<tr>
<td></td>
<td>I have learned so much from zir.</td>
</tr>
<tr>
<td></td>
<td>I support zir in the conversation by honoring zirs pronouns</td>
</tr>
<tr>
<td>Ze, hir, hirs</td>
<td>Ze is kind.</td>
</tr>
<tr>
<td></td>
<td>I love hirs perspective.</td>
</tr>
<tr>
<td></td>
<td>I support hir in the conversation by honoring hirs pronouns</td>
</tr>
</tbody>
</table>

*Chart adapted from Vanderbilt*

---

We can advance meaningful conversations about stigma by being intentional and respectful.
1. Name the form(s) of stigma reflected in each picture:

**Forms of stigma**

a. **Isolation and Rejection** - Based on ignorance and fear about HIV transmission or behaviors of a marginalized group. The person stigmatized is forced to sit alone and others avoid casual or intimate contact with them.

b. **Shaming and Blaming** - Gossip, name calling, insulting, judging, shaming. Stigmatized people are “blamed and shamed” for assumed “bad behavior”, i.e. for breaking social norms.

c. **Discrimination (Enacted Stigma)** - Unfair treatment, such as refusing to provide health services to people living with HIV and high risk populations, treating them last, or testing clients without their consent.

d. **Self-Stigma** - People living with HIV or key populations may stigmatize themselves in reaction to stigmatization from society. They may accept the blame and rejection of society, and withdraw from social contact or exclude themselves from accessing health and other services out of fear of having their status revealed.

e. **Stigma by Association** - The families of people living with HIV or key populations may be stigmatized by others in the community. Some health workers are also stigmatized for working with people living with HIV or key populations.

f. **Layered Stigma (intersectionality)** - Key populations (e.g. sex workers, gay and bisexual men, transgender individuals, people who use drugs, people in prison) are already stigmatized. When living with HIV, they are doubly stigmatized- adding another layer of stigma.

2. What do you think is happening and why?

3. What stereotypes or narratives inform understandings or readings of the images/pictures?

4. Is the stigma/bias depicted reflected in your life or community? If so, give examples. If not, why not?

5. How does this make you feel? Why?
   - If you do not register particular feelings, why do you believe this to be the case?
Activity 2: Thought-Provoking Questions

- Facilitator Notes: After each question, allow time for each person to write/record their thoughts (within 2 minutes):

1. **Domain: Fear of Infection.** Do you fear that you could contract HIV if you come into contact with the saliva of a person living with HIV?

2. **Domain: Social Judgement.** Do you agree or disagree with the following statement: I would be ashamed if I or someone in my family had HIV.

3. **Domain: Legal and policy environment.** Is there a law that prosecutes/criminalizes those who do not disclose their HIV status to partners and employers in your state?
   - Is there a law that protects LGBTQ/SGL individuals in your state?
   - What public policies help to prevent HIV and also provide access to treatment for people living with HIV?

4. **Domain: Anticipated Stigma.** In your opinion, are people hesitant to take an HIV test due to fear of people’s reaction if the test result positive for HIV?

5. **Domain: Perceived Stigma.** Do people talk badly about living with or thought to be living with HIV to others?
   - Do people living with or thought to be living with HIV lose respect or standing?

6. **Domain: Experienced Stigma (outside of legal perspective).** Would you buy fresh vegetables from a shopkeeper or vendor if you knew that this person was living with HIV?

7. **Domain: Experienced Stigma (inside legal perspective).** Do you think children living with HIV should be able to attend school with children who are HIV negative?

Answering questions about perceptions of people living with HIV can yield amazing insights into how stigma shapes our thinking.
Activity 3: Media Analysis

Use multimedia (movies, television shows, songs, podcasts, etc.) that have positive and affirming approaches to centering HIV/AIDS topics to spark conversation.

- Watch and discuss films like Tongues Untied, Life Support, and 90 Days:

- Engage with the Positive Spin series (https://positivespin.hiv.gov/)

After viewing/engaging with media, use the following prompts to facilitate conversation:

1. What happened?
2. How did the characters feel and why?
3. What stereotypes or bias inform beliefs and practices employed?
4. How do you feel about what sharpened and why?
5. What support systems were in place for the characters and why did they matter?
6. How do the experiences in the film relate to your personal experiences?
7. What would you change, how and why?
Step 4: Reflect
Facilitator Note: Please note that speaking about stigma may bring up trauma or painful memories. Consult the additional resources if anyone is in need of additional support beyond that which the group can provide.

This activity was adapted from
Understanding and Challenging HIV Stigma: Our Experience As Stigmatizer.

• Individually reflect.
  • Write about a time in your life when you felt isolated or rejected for being perceived as different and answer the question: How did you feel when you were stigmatized?
  • Write about a time in your life when you isolated or rejected someone for perceiving them as different and answer the question: What thoughts, feelings, or words do you associate with stigma?
    • What stops you as a conduit of change?
    • What beliefs, philosophies or lived experience could influence the way in which I perpetuate stigma?
• Invite everyone to share their stories to the group.
  • Answer as a group:
    • What common language was used in the experiences we had being stigmatized and stigmatizing others?
    • What language should not be used going forward and why?
    • What language should replace problematic language or otherwise be used to support additional conversation?

Step 5: Close the Discussion
Facilitator Note: Be sure to close the discussion after engaging in meaningful conversation. Each person should answer these questions to the others:

• What did you learn from this discussion?
• What will you do differently the next time you talk to someone about HIV?

ADDITIONAL RESOURCES:

1. HIV 101
2. Understanding and Challenging HIV Stigma
3. Facilitator’s Training Guide For A Stigma-Free Health Facility
4. Positive Spin Facilitator’s Guide
5. Measuring HIV Stigma and Discrimination
6. Positive Women’s Network - USA
7. Association of Black Psychologists
As someone who truly believes Black lives matter, I will stand up to end HIV stigma by creating Black-centered spaces where people feel empowered, supported, and free from shame.

I Pledge to do the following:

1. **Be Informed.** I commit to eliminate HIV/AIDS and LGBTQ/SGL stigma.

2. **Be an Advocate.** I will engage in courageous community conversations with family, friends, support groups, elected officials or co-workers to eliminate stigma and increase HIV prevention, treatment and support. I will talk to my elected leaders and ensure they advocate for culturally inclusive policies and practices.

3. **Spread the Word.** I will share the Words Matter campaign using the hashtags #YourWordsMatter #EndHIVStigma #StartTalkingStopHIV.

4. **Be Protective.** I will get tested regularly and encourage those I know and love to do the same.
YOU SHOULD GET TESTED FOR HIV AT LEAST EVERY SIX MONTHS.

Need help finding somewhere to get tested? Visit HIV Testing search tool to find testing services in YOUR local community.

You can also find an HIV testing location near you:

TEXT YOUR ZIP CODE TO “KNOW IT” (566948)
CALL 1-800-CDC-INFO
Talk to your public officials about how HIV is impacting you and your community. Familiarize yourself with HIV criminalization statutes in your state and engage your public officials that have the power to repeal these stigmatizing laws. In addition, make sure your elected leaders on all levels of government are working to ensure that all people have access to quality and affordable health care, especially people living with HIV and other pre-existing conditions like diabetes and hypertension that disproportionately impact Black people. In order to end the epidemic, we must change our culture in our communities, but we must also be leading efforts to ensure our government is advancing public policies that support our collective health and wellness.

**Meet With Legislators & Other Public Officials**

**WHY ADVOCATE?**
The best public policy in the world will not be codified (signed into law) if it is not supported by human relationships based on repeated, intentional interaction.

- The most likely thing to change the mind of a Member of Congress: #1 meeting a constituent, #2 other lobby/advocacy visits, #3 personal phone calls, #4 personalized letter or email, #5 Letter to editor, #6 post-cards or petitions.
- Elected officials are elected to serve their constituents and and should be aware of the issues that matter most to you and those you love.
- Politics is local. While Federal advocacy is sexy and necessary, build relationships with your local and state representatives (before you need them).

**Remember, If you are not at the table, you may be on the menu. #workwoke**
PREPARATION FOR MEETING
• Research your federal senator or representative: positions on key issues, committee assignments.
• www.govtrack.us: provides basic information including voting records.
• http://capwiz.com/fconl/directory/congdir.tt provides information on Members’ votes, staffer, political action committees and committee assignments.
• Know the issue. Prepare to state reasons for your position/recommendation (and read what your opponents say to speak to the concerns they may raise).
• Identify organizations who work on your issues and use the resources they provide to prepare and support your position/recommendation.
• If in a group, plan your speaking roles. Decide ahead of time who will say what and in what order.
• Have an ask: an action you expect the member to take that is related to your position/recommendation (clearly how action or lack of action will impact you and those you love).
• Have a plan to follow up, consistently to build trust and strengthen relationships over time.
• Value and respect everyone you meet. Remember staff members become elected officials every cycle.

YOU CANNOT GET WHAT YOU DON’T ASK FOR
• ALWAYS HAVE AN ASK! Know what you want to get out of the meeting, before requesting the meeting.
• Having an ask provides you with something to follow up on, something to hold elected officials accountable to.
• Asks can include requesting that a member introduce legislation or vote to advance or stop a particular bill.
OUTCOMES

• You may not get an answer during the meeting or immediately after making an ask, and that is ok. Follow up.

• Staff may not have an answer or feel comfortable speaking on behalf of the legislator, but convey information. When this happens your follow up should include a question about if the legislator has been briefed and if they have a response or update to convey.

• If you do not have an answer to a question, that is OK too. Tell them you will follow up and leverage organizations like the NBJC to support you in responding in a reasonable amount of time.

FOLLOW-UP

• Send a thank you note.

• Revisit your ask and ensure your follow up until you receive clear information about how the legislator will respond to your ask.

• If you promised to share information after the meeting, do so expeditiously.

• Identify ways to be helpful including by sharing relevant, important information and volunteering to support the legislators efforts.

• Be helpful and remember: It’s all about building relationships.

You know best how your elected officials can support you, your family and communities at-large. Visits or other opportunities to engage with your elected officials (E.g. letter writing campaign, call office) are an opportunity for you to meet the leaders who represent you and those you love.

Advocacy & Action

If you remember nothing else remember the following: you are the expert, push elected officials and their staff to work for you.
Connect with Us Digitally

Demonstrate your support for the #WordsMatter campaign by personalizing the following content to suit your voice and personality. Be sure to include #WordsMatter #WordsMatterHIV, #EndHIVStigma and #StartTalking so we can find and share your messages!

Campaign Hashtags:

Please use the following hashtags when posting on social media about the importance of #Words Matter

#WordsMatter
#WordsMatterHIV
#EndHIVStigma
#StartTalking

Sample Tweets/Instagram Caption Media Posts:

• Finish this statement “I commit to #EndHIVStigma because ___________.” #WordsMatter.
• Too often language is used as a tool of oppression. We have chance to #EndHIVStigma because #WordsMatter.
• Words Are Tools That Have The Power To Destroy Stigma. #EndHIVStigma #WordsMatter.
• #StartTalking because #WordsMatterHIV when you talk to partners and friends.
• #WordsMatter when you talk to your partners and friends. Let’s have a conversation #EndHIVstigma.
• “Oppressive language does more than represent violence; it is violence; does more than represent the limits of knowledge; it limits knowledge.” -Toni Morrison #WordsMatterHIV.
• “I have come to believe over and over again that what is most important to me must be spoken, made verbal and shared, even at the risk of having it bruised or misunderstood. – Audre Lorde” #WordsMatterHIV.
• Ending HIV is important because none of us are free, until all of us are free. As @mrdavidjohns says #letsgetfree.
